Team Rural Water!

Delaware Rural Water Association (DRWA), an affiliate of the National Rural Water Association is headquartered in Duncan, Oklahoma. DRWA programs are funded through Federal and State funds and our memberships.

DRWA is a membership oriented association which is a non-profit corporation governed by a Board of Directors from rural water systems in Delaware. With increased regulations and fewer funding sources, it has become more critical that our systems be actively involved in the legislative process. Be involved in rural water!

We do not sell any products or promote one product over another. We provide unbiased help to rural water and wastewater systems regarding products and the suppliers that provide those products.

About DRWA

Mission Statement
The mission of the Delaware Rural Water Association (DRWA) is to improve the quality of utility services for rural Delaware while protecting our natural resources.

To accomplish this mission and to protect the quality of life in rural Delaware, the Delaware Rural Water Association was incorporated in 1990 as a non-profit association. A volunteer Board of Directors that include water operators, town managers, and supervisors throughout the state of Delaware governs.

Protecting the Public Health
DRWA promotes public health protection for rural communities and municipalities. The Association trains and assists all community water professionals in their efforts to provide quality drinking water to their communities, neighbors, and families.

Protecting the Environment
DRWA promotes water conservation and protection through publications and public awareness campaigns. Information and research provided to government officials aid in the development of effective regulations. DRWA is an affiliate of the National Rural Water Association who operates what EPA officials call “the most successful sourcewater protection program in the country”.

Training

DRWA’s specialized training sessions provide water and waste water professionals with an opportunity to resolve problems by sharing ideas with state and federal agencies, engineers, contractors, manufacturers, suppliers, and other system personnel. Training sessions cover a broad spectrum of needs ranging from chemical treatment, federal water and wastewater regulations, financial management practices and operator certification. The training allows water professionals to upgrade their skills, improve the quality of their utility’s service and to protect their community’s health.

DRWA’s Annual Technical Conference and Exhibition attracts water and wastewater professionals, government officials, manufacturers, and suppliers together in one location allowing them to participate in specialized training and the ability to learn about the latest trends in technology, government regulations, and system management techniques.

DRWA’s On-Site Training Unit (OSTU) was developed in cooperation with the Office of Drinking Water and funded through an EPA grant. The unit has classroom space, resource materials, and industry equipment. DRWA travels around the state to provide certification hours to operators who can’t leave their systems to attend training. System operators use our hands-on training for water testing, meter testing, cross-connection, fluoridations, well security and more.
