LIMITED!**

## FLOOD RESILIENCE: Training for Water and Wastewater Utilities

To encourage communities to build greater resilience, the Delaware Rural Water Association (DRWA) and the U.S. Environmental Protection Agency are hosting ***Flood Resilience: Training for Water and Wastewater Utilities***, a training designed for the water sector in Delaware. This one-day training will provide guidance and information for drinking water and wastewater utilities to enhance their ability to withstand a flooding event, minimize damage, and rapidly recover from disruptions to service.

### TRAINING OBJECTIVES

- Learn how to use the U.S. EPA tool "*Flood Resilience: A Basic Guide for Water and Wastewater Utilities*" (*Flood Resilience Guide*)
- Complete an example flood assessment using the Guide that also enables you to repeat the assessment at your facility
- Learn how to identify mitigation measures to effectively protect your utility from flooding
- Learn about funding options for implementation of mitigation measures
- Network and learn from each other

### TRAINING FORMAT

This training will include working sessions on each of the four primary sections of the *Flood Resilience Guide*, provide real-world examples of recent flood impacts and flood mitigation efforts, and provide information about funding options for mitigation projects that utilities may want to implement. A scenario used during the training examines the impact of flooding on a hypothetical utility and provides participants an opportunity to conduct an example flood assessment.

### WHO SHOULD ATTEND?

Drinking water, wastewater and stormwater utility staff and management involved with planning, operations, and risk management; water sector associations; technical assistance providers; and consultants.

### TO REGISTER AND FOR MORE INFORMATION

To register for this event, please visit the registration website at:
