# Industrial Safety and OSHA Regulations

Monday, June 10<sup>th</sup> 2024

The Industrial Safety and OSHA Regulations course is a comprehensive exploration of workplace safety practices and compliance with the regulations established by the Occupational Safety and Health Administration (OSHA). This course is designed to equip participants with the knowledge and skills necessary to create and maintain a safe working environment, reduce workplace hazards, and ensure adherence to OSHA standards. It covers essential topics in industrial safety, risk assessment, legal obligations, and best practices for enhancing workplace safety.

Time: 9:30am- 2:30pm  
ECH: 5.0 Hrs. Wastewater - Indirect  
Location: DRWA Training Facility  
210 Vickers Drive  
Milford, DE.19963  
Kent County  
Cost: FREE - EPA Compliance Program  
Instructor: Mark Catlin-Brown

## The Delaware Rural Water Association Apprenticeship Program

At DRWA, we are highly aware of the need for skilled Water and Wastewater System Operation Specialists, and we have been working diligently to address this need. Our Apprenticeship Program was registered with the Delaware Department of Labor in May 2019 with our first class graduating in the Spring of 2021.

### Why Do We Need the Apprenticeship Program?

**In the next five years, 30-50% of water professionals are expected to retire.**

Our program was created as a direct response to the need to transfer the knowledge of Water and Wastewater Professionals to the next generations before their retirement. By enrolling in our program, the Apprentice will become a member of a valued and knowledgeable team that helps to preserve our most valuable resource, water.

## Cross-Connection-Control Program

### WHY IS A CROSS-CONNECTION CONTROL PROGRAM SO IMPORTANT?

A cross-connection control program is not only critical from a public health perspective, but also in preventing significant exposure, litigation, and financial loss to anyone not in compliance with this important regulation.

#### It Protects Public Health.

Normally, water in a home or building flows in one direction. Under certain conditions, water can actually flow backwards; this is known as backflow, which can introduce contaminants into the drinking water supply with dangerous – even lethal – consequences.

#### It's The Law.

State and local regulations and plumbing code require approved backflow prevention methods to be installed at every point of potable water connection and use. Fines, penalties, and the loss of water service are all possible if non-compliant. Furthermore, if contamination occurs and an individual or a group of individuals or their property suffers damage due to a backflow incident, they may seek damages from the municipality and the entity that contributed to the contamination.

## DRWA's Upcoming Events

**Thursday, October 3<sup>rd</sup> 2024**

### Barry Walter Memorial Golf Outing
